SBPD - Future Ideas/Work to be Done

1. Send custom notifications/messages to the Box UI interface so the end user is able to see the progress in video processing and indexing
2. Migrate code to be in compliance with updated Video Indexer API
    a. Any new accounts created will be in compliant with the API following the retirement of Azure Media Service
3. Potentially creating a subscription based account on Video Indexer
    a. (NOTE) Subscriptions based accounts may need a different type of access token compared to the trial accounts. Might get an ARM api error.
4. Modularization of code, perhaps create two files (one for each event call)
5. Complete any merging that wasn't accomplished due to unforeseen issues
6. Implementation of a fully working custom language model
